

Narda EMF drive test solution

Narda EMF Area Monitors are equipped with exclusive, state-of-the-art sensors having high sensitivity, accuracy and reliability.

Their robust, uncluttered construction is perfect for long-term outdoor installation.

The AMB-8059 handles applications from a few Hertz through to long wave and on up to high frequency microwave radiation using a selection of interchangeable probes for electric and magnetic fields.

- › Interchangeable probes from 10 Hz to 60 GHz for low frequency & high frequency application
- › Multi-band probes for telecommunications monitoring
- › Electromagnetic fields level maps in a minimum of time
- › On board GPS synchronized with the field strength
- › Common GPS Format for easy exchange
- › Easy installation and removal on vehicle roof thanks to the magnetic mounting kit
- › Capability of live results on a laptop through a fiber optic cable
- › No influence on the measurement values due a copper cable

Area monitor AMB-8059/00
with Car Mounting Kit option

Fast and Continuous Monitoring

The Car Mounting Kit is an option of the area monitor AMB-8059/00. It allows for monitoring wide geographical areas while driving. EMF data are correlated with GPS coordinates to identify areas requiring more detailed measurements. Direct readings in the car, on a laptop, are possible by means of the fiber optic link.

Vehicle and station are galvanically isolated.

The magnetic base mount allows for safe, quick installation on any car roof (non-magnetic hardtops excluded).

A simple software shows, in real time, values of each band and according to the ITU-T, directive K.113, it is possible to monitor data acquisition and set a luminous and acoustic alarm that is activated according to vehicle's speed.

Google Earth

The maximum potential is however obtained from the use of Google Earth. In addition to saving data in the GPX format, the user can choose to have a KML file, perfectly compatible with the Google viewer.

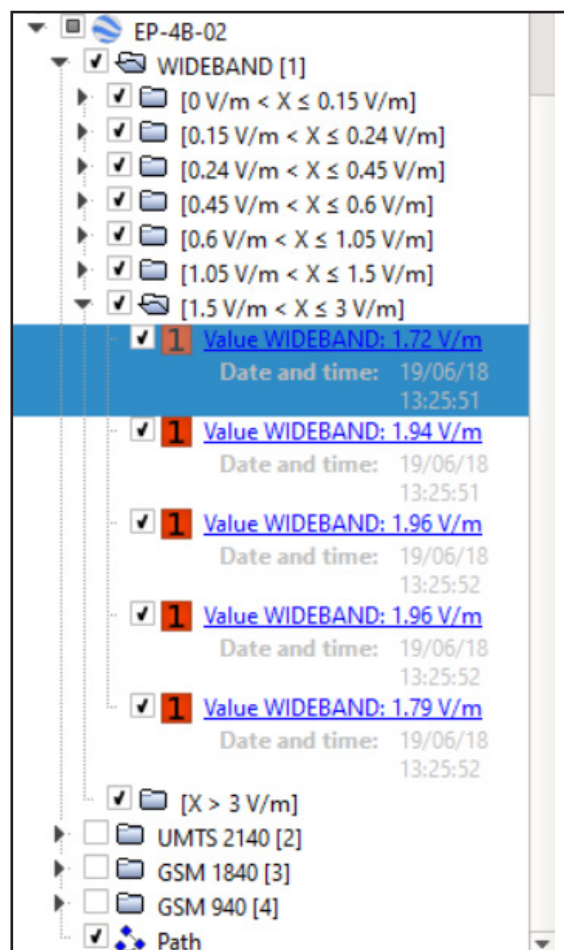

The data of the probes are divided into levels according to the number of bands and each band is, in turn, divided into sub-levels according to the ITU-T directive K.113 and to the limits set by the user.

On the map, in addition to the route, the field values are indicated with different colors according to their criticality.

For each data collected it is also possible to display additional characteristics such as temperature, humidity, battery voltage, speed, acceleration, date and time.

SPECIFICATIONS

AMB-8059 Car Mounting Kit option*

General Specifications	
Field probes	Interchangeable
Interfaces	USB through optical fiber, Wi-Fi**
Other alarms	Protective case opening, internal overheat, internal humidity, low battery, probe malfunction, field over limit
Internal battery	Non rechargeable primary battery, lithium SAFT LSH20 3.6 V, 13 A/h, commercially available
Vehicle speed	0 to 60 km/h
Sample rate	300 ms (GPS coordinates synchronized with EMF)
Operating time	Over 200 h (max current consumption 40 mA with Wi-Fi OFF)
Max data storage in drive test application	18 hours
Installation	Magnetic mounting kit for the vehicle
Compliance	2014/30, 2014/35, CEI 211-6, CEI 211-7, ITU-T K.83, ITU-T K.113
Ambient temperature	-20 to +55 °C
Dimensions	301 x 241 x 750 mm (complete of AMB-8059/00)
Weight	Less than 3 kg
Environmental protection	IP55
Country of origin	Italy

* The Car Mounting Kit is a separate option of the AMB-8059/00 and has to be purchased apart

**Future implementation on the Narda EMF GPS Logger software.
